

Packaging Coatings end uses: Food, Beverages, Cosmetics, Pharmaceuticals, Technical fillings.

The FCRA department sends a special questionnaire to the raw material supplier to inquire about the (food contact) regulatory status of a raw material. With the data and information received, the FCRA department can evaluate and assess the suitability of a raw material.

The substances of concern are attached to a questionnaire sent to suppliers for confirmation and awareness.

Changes in the composition or of the regulatory status of a raw material used in the PKG BU must be notified to PPG's Raw Material Management team and the regional FCRA department.
